

Fact Sheet

//// Breeze

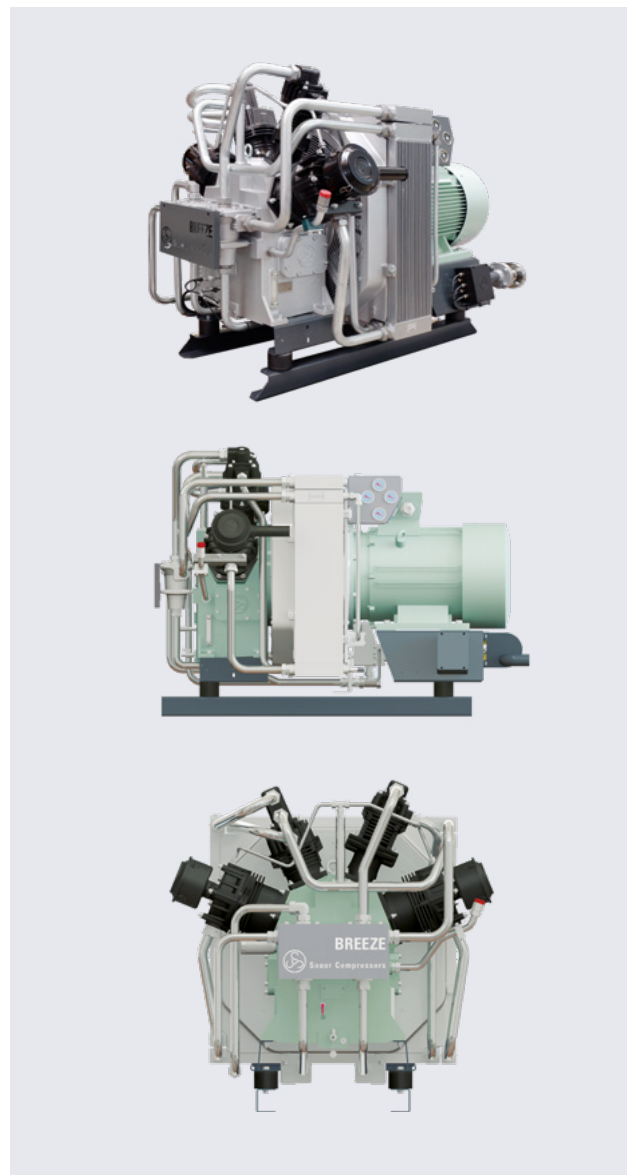

The next generation of air-cooled compressors.

The **//// Breeze** series is the latest generation of Sauer medium pressure compressors. Developed from the ground up, the series represents the latest in compressor technology. In addition to the efficiency and durability that traditionally characterise Sauer compressors, machine safety, ergonomics and a modern human machine interface were the main focus during development.

Features such as the new cooler arrangement between compressor and motor, the CubeCooler concept and the combination of all interfaces on the rear of the machine offer users tangible advantages in everyday operation.

CubeCooler

The new CubeCooler enables recooling temperatures that are more than 30 % lower than those of conventional cooler configurations. For a high cooling capacity like this the coolers have been arranged radially around the combined fan and flywheel.

BREEZE SERIES

MODEL	Final pressure [psig]	Stages	Cylinders	Volume Flow Rate @ 50 Hz [scfm]	Power Consumption [HP]	Dimensions L x W x H [in]	Weight [lb]
WP221LM	580	3	4	175	80	75 x 59 x 59	2,486
WP323LM	580	3	4	245	130	77 x 59 x 59	2,596

Dependable up to 7,000 psi – anywhere, anytime, anygas.
